Gravitational lensing at milliarcsecond angular resolution

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. E. Sterken
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op
maandag 4 februari 2019 om 12:45 uur

door

Cristiana Spingola

geboren op 25 januari 1989
te Perugia, Italië

Promotores

Prof. dr. J. P. McKean

Prof. dr. L. V. E. Koopmans

Beoordelingscommissie

Prof. dr. P. D. Barthel

Prof. dr. S. Serjeant

Prof. dr. R. L. Webster

Front cover: The contours indicate the gravitationally lensed radio emission on milliarcsecond scales from AGN jets at $z = 3.2$ in the lensing system MG J0751+2716.

Back cover: The contours represent the intrinsic radio emission of the AGN jets at $z = 3.2$ in the lensing system MG J0751+2716. The background consists of paint drops on black (from Freepik).

ISBN: 978-94-034-1286-3 (electronic version)

ISBN: 978-94-034-1285-6 (printed version)

Printed by *Gilderprint* (Enschede) on recycled paper

*To Davide,
I couldn't make this without you.*

Contents

1	Scientific Introduction	9
1.1	Challenges to the Λ CDM model	9
1.2	The Universe under a cosmic telescope	12
1.2.1	Basic concepts of gravitational lensing	12
1.2.2	Gravitational lens modelling	16
1.2.3	Deviations from a smooth model	18
1.3	Gravitational lensing at radio wavelengths	19
1.3.1	High angular resolution with interferometry	21
1.3.2	Radio interferometers used in this thesis	22
1.4	Thesis outline	26
2	Modelling gravitationally lensed radio arcs imaged with global VLBI observations	29
2.1	Introduction	30
2.2	Observations	34
2.2.1	Very Long Baseline Interferometry data	34
2.2.2	<i>Hubble Space Telescope</i> data	36
2.3	Lens Modelling	38
2.3.1	Parametric lens modelling	38
2.3.2	Results	43
2.4	Discussion	47
2.4.1	Precision lens modelling with global VLBI observations	47
2.4.2	Evidence for additional mass structure	50
2.4.3	Evidence in favour of the two-phase galaxy formation scenario	51

2.5	Summary and Conclusions	52
3	Resolving the CO (1–0) molecular gas around two radio-loud dust-obscured lensed AGN at high redshift	57
3.1	Introduction	58
3.2	Targets	61
3.2.1	MG J0751+2716	61
3.2.2	JVAS B1938+666	62
3.3	Observations	62
3.3.1	W. M. Keck Telescope adaptive optics	65
3.3.2	<i>Hubble Space Telescope</i>	65
3.3.3	Karl G. Jansky Very Large Array	67
3.4	Lens plane properties	70
3.4.1	MG J0751+2716	70
3.4.2	JVAS B1938+666	80
3.5	Intrinsic source properties	84
3.5.1	Source plane inversion	84
3.5.2	Source-plane morphology of MG J0751+2716	85
3.5.3	Source-plane morphology of JVAS B1938+666	88
3.6	Resolved molecular gas emission at high redshift	90
3.6.1	CO–H ₂ conversion factor and molecular gas mass	90
3.6.2	Dynamical masses	91
3.6.3	Gas fractions within dust obscured AGN	92
3.7	Discussion	93
3.7.1	Evidence for extended molecular gas reservoirs	94
3.7.2	Compact stellar cores at high redshift	96
3.8	Conclusions and future outlook	98
4	Proper motion in lensed radio jets at redshift 3: a possible dual super-massive black hole system in the early Universe	103
4.1	Introduction	104
4.2	The target MG B2016+112	105

4.3	Multi-epoch VLBI imaging	111
4.3.1	Observations	111
4.3.2	Data reduction	112
4.3.3	Measurement of the lensed image positions	113
4.3.4	Alignment of the two Epochs	114
4.4	Lens modelling	117
4.4.1	The lensing galaxies have moved	117
4.4.2	The source has moved	118
4.5	Discussion	125
4.5.1	Single AGN scenario	125
4.5.2	Dual AGN scenario	126
4.6	Conclusions and future work	129
5	A novel search for gravitationally lensed radio sources in wide-field VLBI imaging from the mJIVE–20 survey	133
5.1	Introduction	134
5.2	Lens candidate selection criteria	136
5.3	Follow-up observations and data reduction	140
5.4	Results	147
5.4.1	Description of the individual lens candidates	147
5.4.2	Testing lens models for the remaining candidates	155
5.5	The lensing statistics of the mJIVE–20 gravitational lens survey	157
5.6	Prospects for future lens searches with wide-field VLBI	160
5.6.1	Compact lensed radio sources	161
5.6.2	Extended lensed radio sources	164
5.7	Conclusions	164
6	Conclusions and future prospects	185
6.1	The mass density profile of lensing galaxies at millarcsecond scales	185
6.2	Cold molecular gas at the early stages of galaxy formation	187

6.3	Proper motions of SMBH at redshifts > 3	188
6.4	Wide-field VLBI surveys: an efficient way to find radio-loud lenses	189
6.5	General conclusions	190
6.6	Future prospects	192
	Samenvatting	194
	Compendio	201
	Bibliography	210
	Acknowledgements	227
